TPRS INNOVINK LACQUERS

INNOVINK - LACQUERS

TPRS Innovink Back Spray Painted Glass is a versatile and stylish solution for enhancing interior spaces with color, privacy, and durability. Our back spray-painted glass combines innovative technology with high-quality materials to provide a range of features that elevate your design projects to new heights.

It has two-part acrylic resin that is naturally curing. It is sprayed onto glass and has a 10-year monolithic guarantee. The two-part mix can then have an added color blended to it and various special effects added in.

FEATURES AND BENEFITS

Back spray-painted glass provides a smooth and uniform color or pattern on the glass surface, enhancing its visual appeal. It allows for customization in terms of color, finish, and design, adding a decorative element to interior spaces. It will not color fade, crack, or peel making it ideal for large areas of glazing. It is ideal for signage and logos.

UV-PROTECTION

Spray paints formulated specifically for glass often include UV protection properties. These additives help to block harmful ultraviolet (UV) rays from the sun, which can cause fading and damage to objects behind the glass. Look for spray paints labeled as UV-resistant or with UV-blocking properties.

CHEMICAL PROPERTIES

Once the spray is on the glass it becomes inert so does not have an impact on the environment. All products are acrylic and are non-carcinogenic and non-toxic. They are produced in bulk ensuring energy consumption is of a minimum.

FIRE RESISTANCE COATING

The paint used for back-painting the glass is specifically formulated to resist fire. These coatings are often made with fire-retardant additives that inhibit the spread of flames and reduce the heat transfer rate through the glass.
